

Appendix B: Place codes

The following lists provide *state-specific* codes for all place variables. This means that, in most cases, the meaning of the place code is dependent on the corresponding state code. The lists are divided into four sections: generic codes; Costa Rican places; U.S. places; and, other (foreign) places. Places for Costa Rica correspond to *cantones*.

Generic

For all geographical variables, there exist a set of commonly used codes:

0000 Concealed code (to protect confidentiality)
8888 Not applicable
9999 Unknown/missing

U.S.-specific generic code:

7777 Existing location, but outside of established municipio/MSA/city.

Note: The *Generic* place codes are the only geo-codes that are *not* state-specific.

The United States

The place codes for the United States refer to metropolitan-statistical-area FIPS codes, as assigned by the Office of Management and Budget (OMB) in 1993. These codes, although not dependent on a single state code like Mexico, are only applicable when the corresponding state variable falls within the range of 100 to 199.
